ISPOR Medical Device Special Interest Group/Working Group

- Since September 2014, the Working Group has deliberated practical differences between medical devices and other health technologies, including drugs. The Group is geographically and professionally diverse, with extensive representation from Europe and North America.

Goals

- Currently, to develop a document, possibly in two parts, describing issues/challenges related to device development, validation, regulation, professional education and commercialization in the context of valuation, reimbursement and adoption. What and why.

Methods

- Perform a gap analysis
- Collect perspectives from stakeholders
- Analyze the role of evidence generation
- Study future roles of HTA for medical technologies
- Give inputs to capacity building and international collaboration

Topics

- Medical device diversity
- Regulatory and reimbursement evidence
- Reimbursement pathways
- Price-access optimization
- Methodological challenges
- Key elements to a value assessment framework for devices
- Primary factors in the development of a common framework

- In the future, propose improved economic validation methods and reimbursement frameworks that accurately reflect total medical device value. How.
